

BRIAN SANTIAGO

IT Support Specialist | Help Desk & Desktop Support | Microsoft 365 | Active Directory | Endpoint Management | ITSM | Security+
Ocala, FL | 631-456-1539 | briand.santiago@gmail.com | linkedin.com/in/briansantiago-grc

PROFESSIONAL SUMMARY

IT Support Specialist with 3+ years of hands-on Tier 1–3 experience across regulated healthcare and education environments. Strong background in ServiceNow, Entra ID, Windows 10/11, endpoint management, onboarding/offboarding, and documentation that directly improves SLA performance and service continuity. Resolves 400+ monthly tickets at 99% SLA compliance while reducing repeat incidents through root cause analysis, knowledge base development, and proactive endpoint hardening. Customer-first mindset with a proven track record of turning high-volume support environments into structured, well-documented operations.

CORE COMPETENCIES

Help Desk & Support: Tier 1–3 Technical Support, First Point of Contact, ITSM Ticket Triage, SLA Compliance, Escalation Procedures, Remote Support, User Enablement, Customer-First Service Delivery

Identity & Access Management: Active Directory, Entra ID/Azure AD, Microsoft 365 Admin, Identity Lifecycle (Onboarding/Offboarding), MFA, Conditional Access, Group Policy, Least-Privilege Access

Endpoint Management: Windows 10/11, Windows Server 2019/2022, macOS, ChromeOS, Device Lifecycle Management, Imaging & Deployment, Patch Management, Endpoint Hardening, NinjaOne RMM, MDM Concepts

Networking & Infrastructure: VPN, DNS/DHCP Troubleshooting, TCP/IP, Wi-Fi, Remote Desktop, Printer/Scanner Support, Asset Inventory & Tracking, Hardware Configuration

Tools & Platforms: ServiceNow, Jira, Freshdesk, Google Workspace Admin, Exchange Online, SharePoint, OneDrive, Microsoft Defender, Event Viewer, PowerShell, HIPAA, SOX, ITIL v4

PROFESSIONAL EXPERIENCE

IT Support Specialist | Ina A. Colen Academy | Ocala, FL | Jul 2025 – Jun 2026

- Staff were submitting 400+ monthly tickets across endpoint, account, printer, application, and classroom technology issues with no structured triage — implemented an ITSM-based prioritization workflow in ServiceNow and NinjaOne, sustaining 99% SLA compliance across all ticket categories and eliminating recurring backlog buildup.
- New hires, role changes, and departures were handled inconsistently, creating access gaps and security risk — administered Active Directory, Entra ID, Microsoft 365, and Google Workspace for 500+ users with documented joiner/mover/leaver procedures, reducing provisioning errors by 90% and strengthening least-privilege access controls.
- Recurring device and configuration issues were consuming disproportionate support time — performed root cause analysis on repeat failures and deployed targeted patches, GPO hardening, and software updates across 200+ systems, reducing repeat incident rate by an estimated 30%.
- Teachers and staff needed reliable technology during instruction hours with zero tolerance for disruption — provided Tier 1–3 support across Windows 10/11, ChromeOS, printers, scanners, classroom AV, Wi-Fi, VPN, Microsoft 365, and Google Workspace, maintaining full operational continuity.
- Escalations and repeat fixes lacked reusable documentation — built a knowledge base of SOPs, troubleshooting guides, and asset notes covering the 20 most common ticket types, cutting average handle time by approximately 25% and enabling consistent first-contact resolution for Tier 1 staff.

Tier 3 IT Support Specialist | Sanitas Medical Center | Remote / FL | Jan 2025 – May 2025

- Healthcare users needed reliable Tier 3 escalation support for Microsoft, endpoint, and access issues — served as the primary escalation point for 300+ users, restoring service across Microsoft 365, Windows, VPN, printers, and cloud tools with documented root cause analysis for each resolution.
- Authentication and connectivity issues were difficult to diagnose from ticket data alone — analyzed Entra ID sign-in logs, VPN records, Event Viewer entries, and Wireshark captures to identify upstream configuration gaps; documented resolutions in a format reusable across future escalations and compliance reviews.
- Audit and security maintenance required defensible, audit-ready records — supported HIPAA/SOX access reviews, patch validation, change documentation, and endpoint hardening evidence, organizing materials into work paper packages that supported compliance and operational review activities.
- Common support issues were being reworked too often — documented escalation paths, troubleshooting steps, and regulated-environment procedures for the most frequent Tier 3 categories, reducing repeat escalation frequency by an estimated 20%.

Help Desk Technician | KM New Living Society | New York, NY | May 2023 – Aug 2024

- Multi-site users needed fast, reliable first-contact support across multiple channels — handled phone, email, remote, and ServiceNow tickets for 150+ users while maintaining 95% first-contact resolution on standard requests and structured ticket notes on every interaction.

- Repeated Windows, Microsoft 365, printer, account, and connectivity issues were generating return tickets — used Event Viewer diagnostics, AD/GPO checks, and structured troubleshooting to identify root causes; standardized fix procedures reduced average resolution time for repeat categories by an estimated 20%.
- Ticket documentation quality was inconsistent, affecting escalation handoffs and audit requests — standardized resolution notes, user instructions, asset updates, and escalation records across all tickets; documentation was later reused to satisfy SOC 1/2 ITGC audit evidence requests.
